Intro to the Project

01. About the Business
02. Challenges
03. Data Overview
04. Analysis
05. Recommendation

About The Business

Burger Gram

- A small fast food shop in Sarhaul Village, sector-18, Gurugram
- A B2C business with a focus on delivering high quality, affordable food.
- The shop has been doing well since its launch (13-Dec-2018). Target customers are children and youth. The goal is to expand its reach and open 5 more franchises in the next 5 years.

Challenges

Raw Material Costs:

Efficiently managing storage and handling costs for raw materials and finished products.

Low Demand:

Addressing products with insufficient sales and revenue.

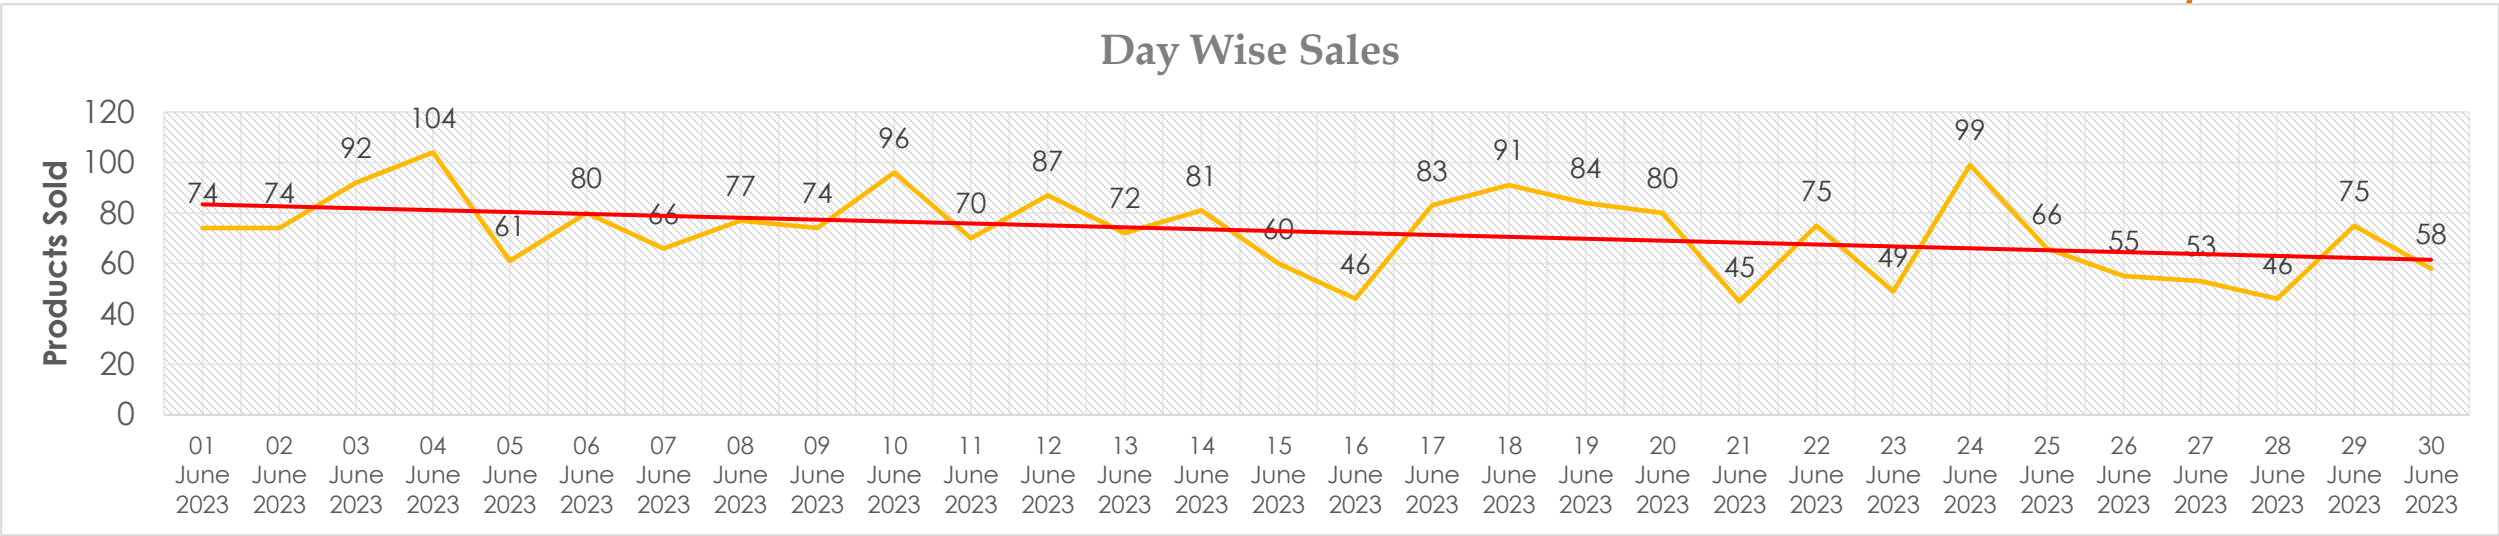
Data Overview

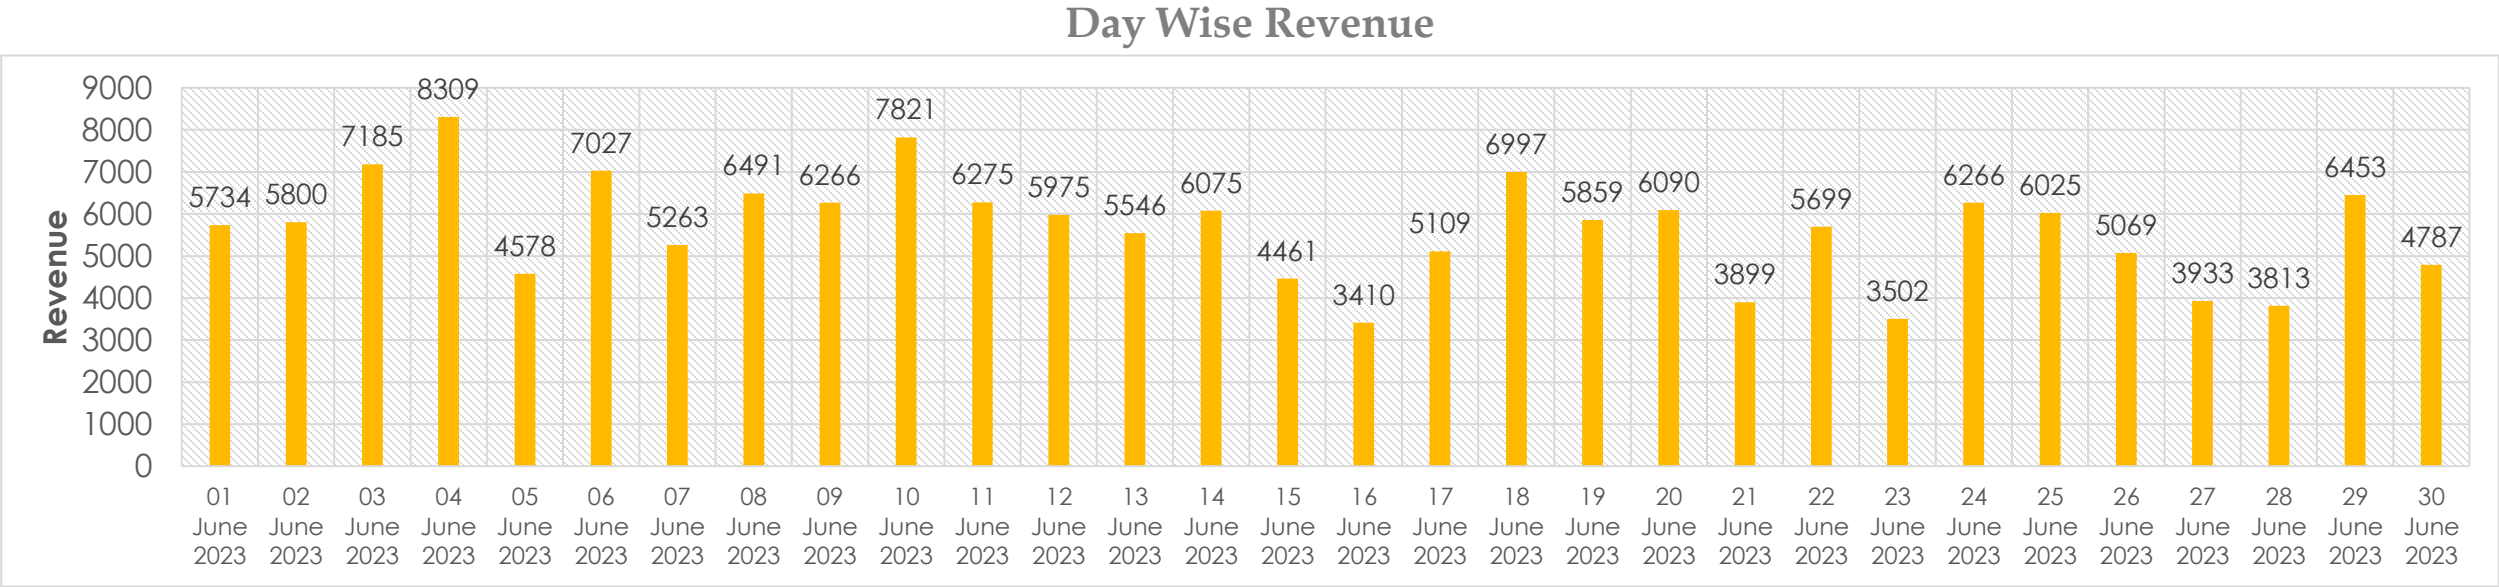
Burger Gram collects and stores only the sales data. The owner writes manually about the sales orders everyday in a register/notebook.

A quick look at the Sales data for the month of June 2023. The data has day wise orders for food item and its quantities with its unit price.

Analysis: Daily Sales and Revenue

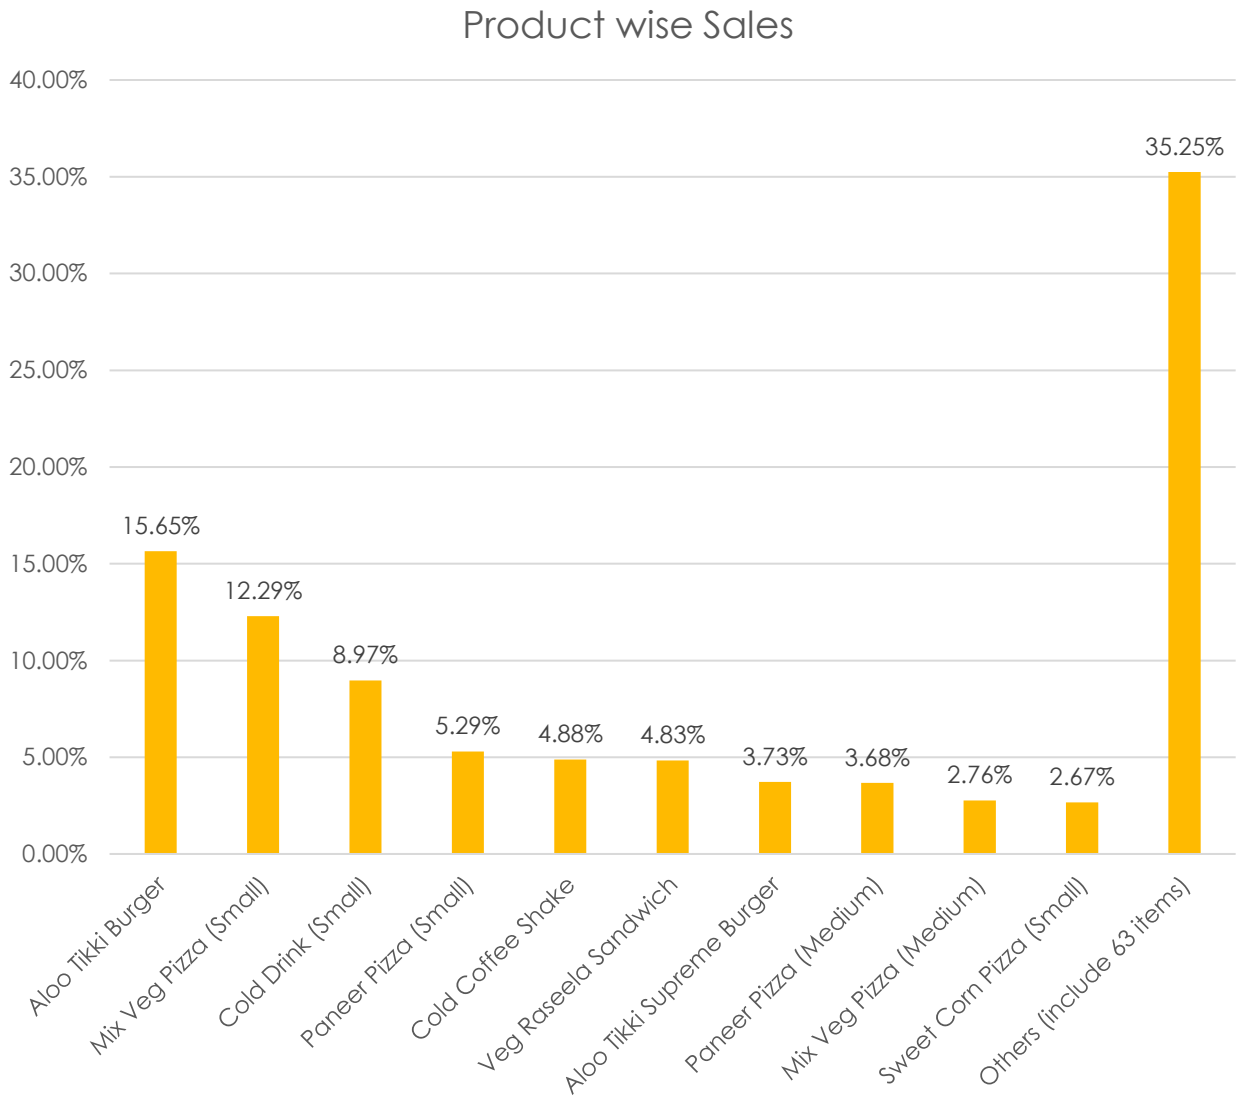
It can be seen from below two graphs, the revenue and sales are directly related meaning when sales increases, revenue also increases.
The trendline shows the overall decrease in sales.

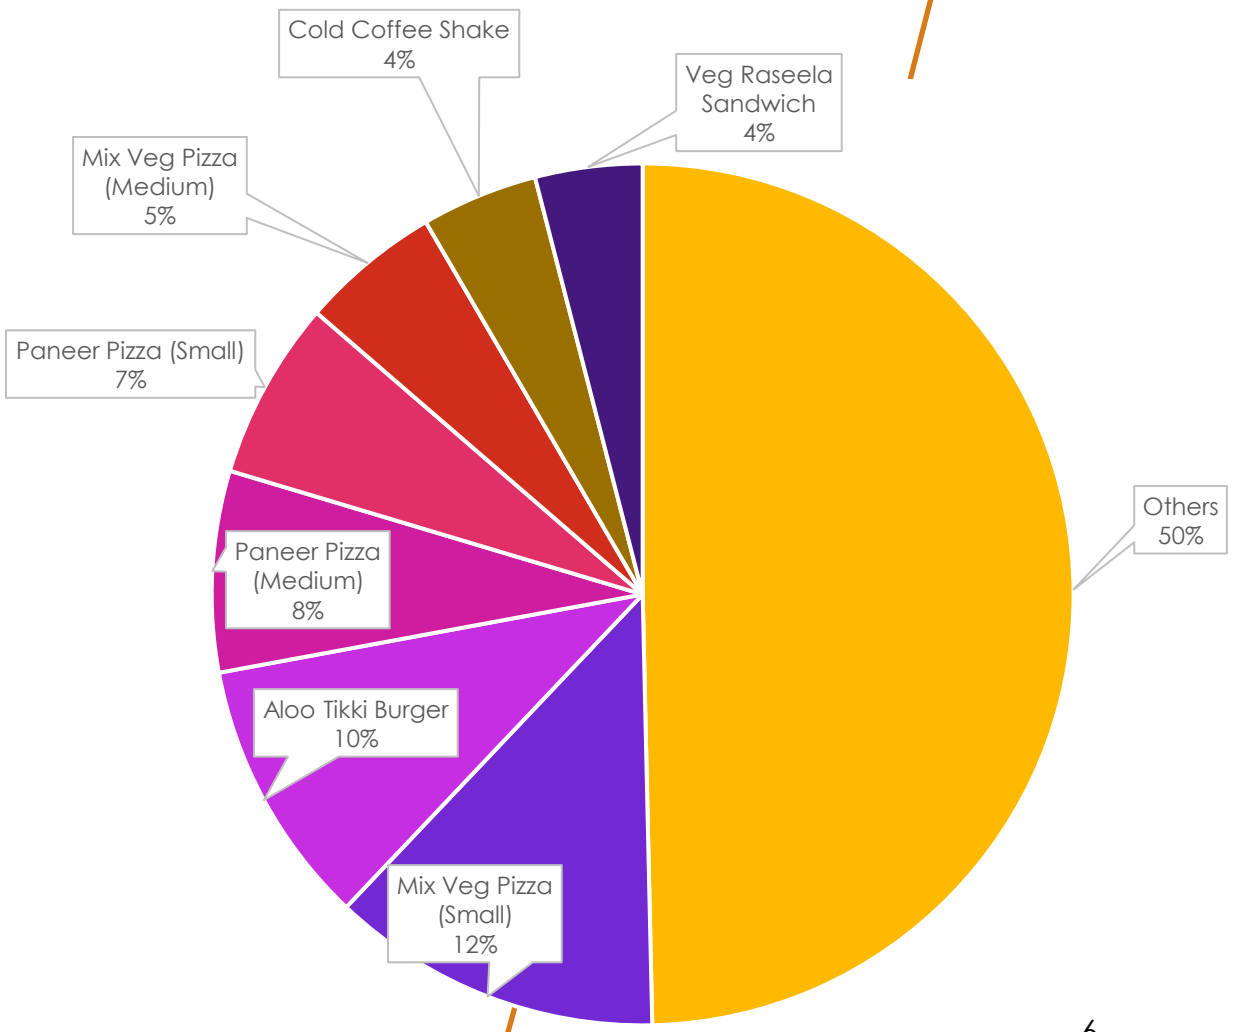




Analysis: Product wise Sales and Revenue

The Aloo Tikki Burger which costs Rs. 50 and Mix Veg Pizza (Small) which costs Rs. 79 are in high demand when combined have 28% sales with just two food items. It also shows that big section of customers prefer low price products in specific category such as Burgers and Pizzas.

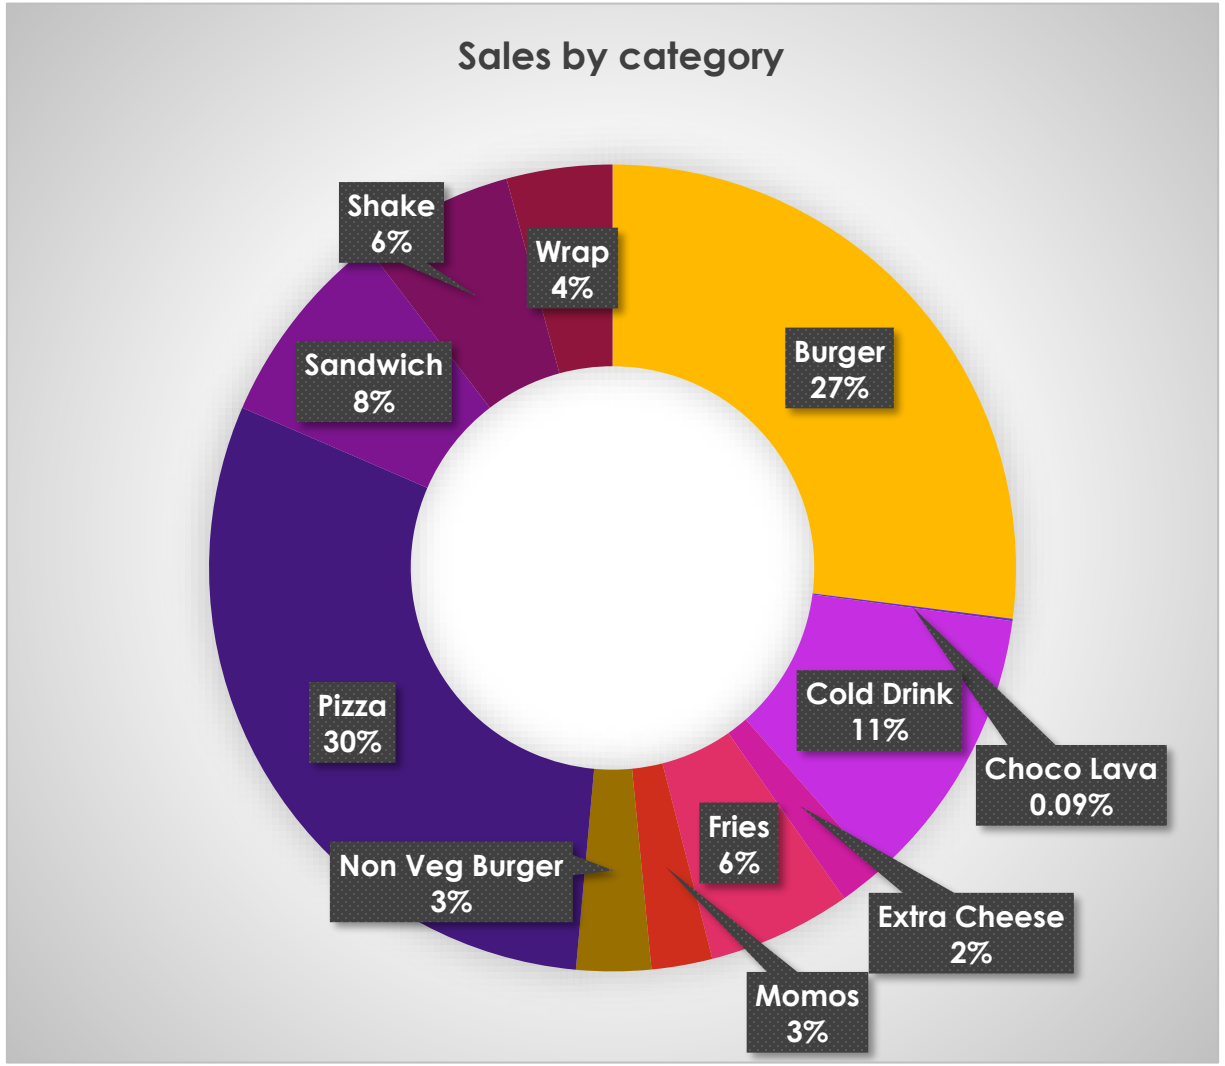


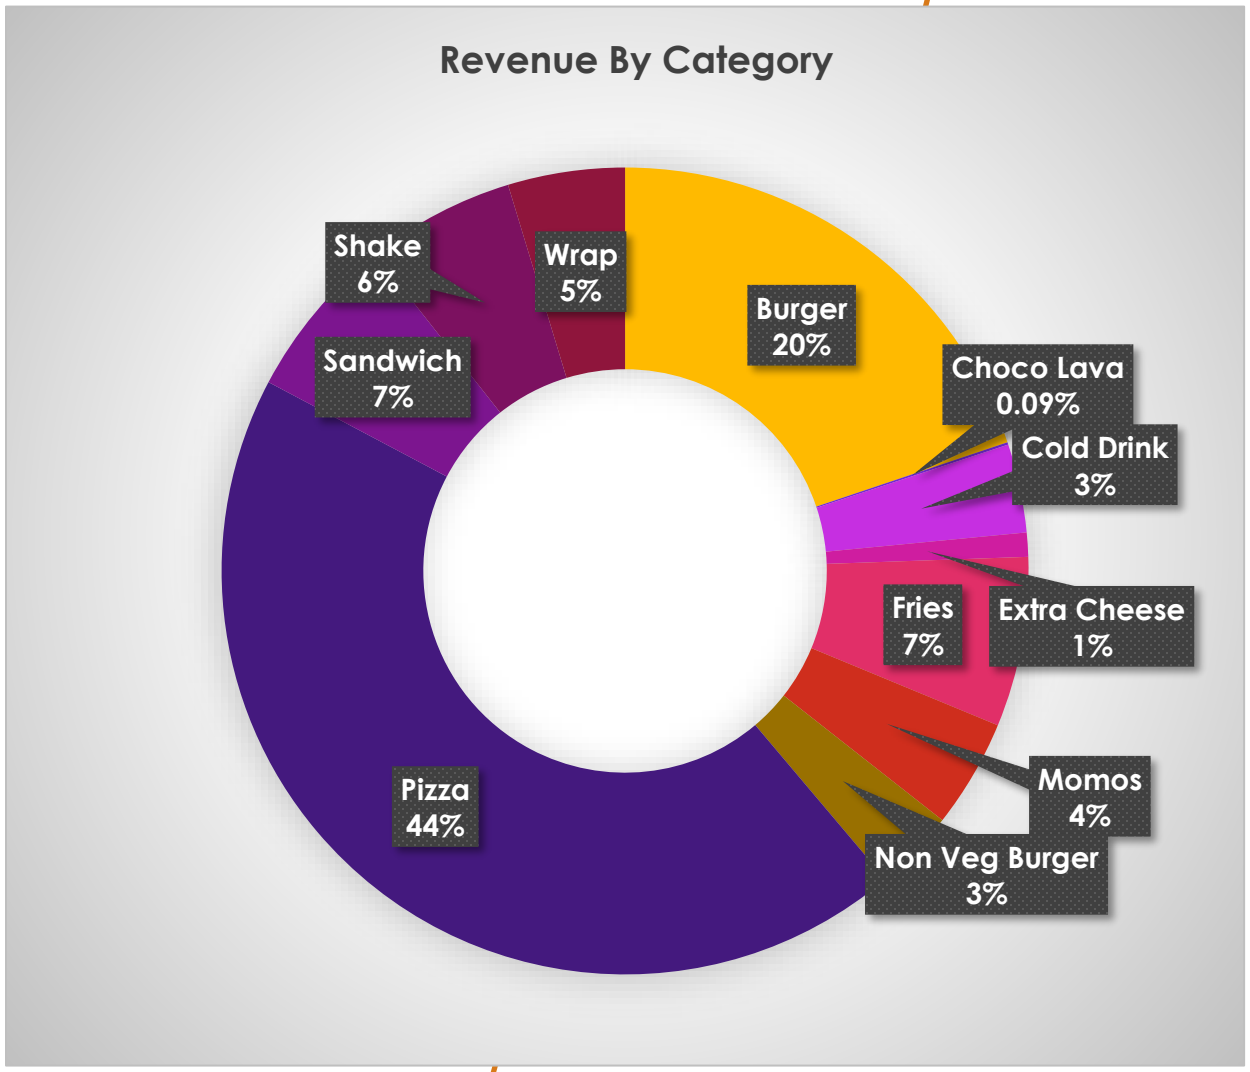


Product wise Revenue Share

Analysis: Category wise Sales and Revenue

The Pizza category alone has 44% of total revenue contributions, this indicates that pizzas are the high performing players and they bring large revenue from low sales volume than Burgers which have only 20% contribution when have 27% sales volume.





Recommendations

Increasing the Sales of high profit item

As we have seen in the analysis, Pizzas are very attractive to customers as well as bring most of the revenue, hence high net profit to the business.

B2B partnerships: Burger Gram can boost pizza sales by partnering with event organizers for bulk orders during special occasions.

Promotions: Burger Gram can opt for promotions for their products which will result in attracting more customers and business can grow much more.

Price increase of product in high demand

We have seen that the Burgers especially, Aloo Tikki Burger alone contributes in sales by approximately 16%. Also, The Mix Veg Pizza Small size and cold drinks have almost 21% share when combined. These items are very cheap in price presently but in high demand. Just by introducing a nominal increase in the price of these three items will increase the net profit.

Least Selling Items

Sweet Corn Pizza (Large)	0.05%
Veg Crisp 'N' Crunchy Burger	0.05%
Chicken Surprise Burger	0.05%
Chicken Crisp 'N' Crunchy Burger	0.05%
Egg Burger	0.05%
Loaded French Fries	0.05%
Chicken 'N' Crisp Burger	0.05%

Items with 0 contribution

Food Item	Category	Price (in Rupees)	Sold
Veg Thick Burger (with Cheese)	Burger	90	0
Double Veg 'N' Crisp Burger	Burger	99	0
Veg Maxican Sandwich	Sandwich	60	0
Burger Gram Spl. Sandwich Veg	Sandwich	100	0
Burger Gram Spl. Sandwich Non Veg	Sandwich	120	0
Chicken Thick Burger	Non Veg Burger	100	0
Fresh Lime	Shake	60	0
Chicken Pizza (Large)	Pizza	349	0

Recommendations

Removing the unnecessary load:

The worst-performing items currently account for a mere 0.35% of the total sales.

By eliminating these underperforming items, the business can achieve two significant benefits: minimal loss, raw material savings.

Many items exhibit zero sales and have failed to resonate with any customer. Continuing to offer them provides no advantage to the business.

Keeping track of data

Beyond sales records, the owner should track all financial aspects of the business. This includes costs, inventory, salaries, rent, and other expenses.

Maintaining a spreadsheet format for data storage ensures easy access and historical analysis. It allows the owner to identify trends, cost fluctuations, and areas for improvement

Customer Feedback Loop will provide direct feedback for decision-making and customer database for loyalty check.

Thank you
